1. What does Social Login?

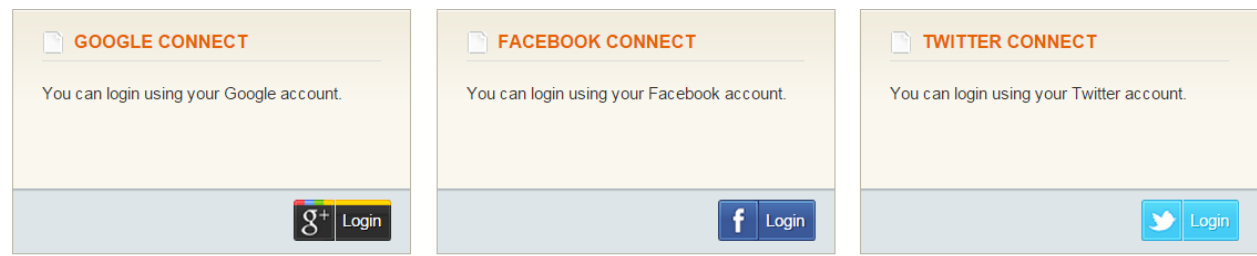

A lot of fields required to fill in when creating a new account may discourage Customers from doing so on your site. Why don't you enable them to log in by their social accounts such as Facebook, Twitter, Google, LinkedIn? With our Social Login extension, Customers just need to click on the preferred account button then enter their username and password! Now they have logged in successfully in just One Click!

Social Login enables people to quickly register or log in to your site using their existing identities from Facebook, Google, Twitter, LinkedIn, Yahoo and so on.

2. How does it work?

You can see the [Social Connect](#) section at the bottom of Login page now. Customers can use this functionality to login to website using their social accounts without the need of registration.

3. Configure social login

Step 1 After installation succeeded, you will see Social Login appears in System > Configuration left panel.

Step 2 Click Item System > Configuration. On the left panel, find **BSS Group** section, click Social Login.

Step 3 Select enabled field: **Yes**

Enter application ID and application key for each social network you want to integrate.
